

GLOBAL (NORMAL MODE)

q q	Quit — press twice, any other key cancels
Ctrl+C	Quit immediately — bypasses any prompt
?	Full keybinding reference — any key closes it and still fires
Ctrl+L	Force a full terminal redraw (stray-character escape hatch)
[]	Shrink / grow the tree pane
{ }	Shrink / grow the backlinks pane

TREE NAVIGATION

j ↓	Move down
k ↑	Move up
l → Enter	Expand
h ←	Collapse
Space	Toggle expand/collapse
Tab	Indent — reparent under previous sibling
Shift+Tab	Outdent — reparent as sibling of parent
K J	Reorder up / down among siblings

CREATE · RENAME · DELETE · UNDO

a	New child note
o	New sibling note
i	Rename selected note
d	Delete — asks for confirmation
y / Enter · n / Esc	Confirm / cancel the delete
u	Undo
Ctrl+R	Redo

EDITING A NOTE'S BODY

e	Open the body editor
Any key	Type / edit — Enter inserts a newline
Ctrl+A	Attach a file (copies into the vault, links it)
Esc	Save and return to Normal mode

While the `[[wikiLink]]` autocomplete popup is open:

↑ ↓	Move the popup's selection
Tab / Enter	Accept the selected title
Esc	Dismiss just the popup, editor stays open

COPY · CUT · PASTE · CLIPBOARD

y	Duplicate selected note in place (deep-copy)
x	Mark for move — p elsewhere completes it
c	Mark for copy — works across vaults
p	Paste (move/copy) as the target's last child
Esc	Clear a pending move/copy mark
Y	Copy the note's raw body to the system clipboard

SEARCH · BACKLINKS · LINKS

/	Open search — type to filter
↑ ↓ · Enter · Esc	Move results · jump · cancel
b	Focus the backlinks pane
j / k · Enter · Esc / b	Move · jump · return focus to tree
f	Follow the note's outgoing links
j / k · Enter · Esc	Move · jump · cancel

TABLE OF CONTENTS

t	List the note's Markdown headings
j k	Move between headings
Enter	Jump to the selected heading
x	Extract section into a new linked child note
Esc	Cancel, keeping the current selection

BROKEN LINKS & NAVIGATION HISTORY

`:brokenLinks` — see Command Palette, page 2

j k	Move between broken links
Enter	Jump to the link's source, scroll to it
Esc	Cancel, keeping the current selection

Ctrl+O	Jump back before your last search/backlinks/links/tags/broken-links jump
---------------	--

TAGS

`:tags` / `:tags list` — see Command Palette, page 2

j / k · Enter · Esc	Move · filter/jump · cancel
---	-----------------------------

THE PROMPT ITSELF

:	Open the command prompt from Normal mode
(type)	Edit the command by hand
↑ ↓	Move a cursor through the popup below, filling the prompt with the highlighted entry's syntax
Enter	Run the command — <i>or</i> , right after arrowing to a pick, just hide the popup and leave the text to finish typing; a second Enter then runs it
Esc	Cancel without running anything

REINDEX & BROKEN LINKS

:reindex	Rebuild the search index for every mounted vault
:brokenlinks	List every broken wikilink across every mounted vault, with a best-guess fix; jump to one to fix it by hand

IMPORT · EXPORT · LANGUAGE · QUIT

:export <path>	Flatten the selected note's subtree to Markdown or PDF (by extension)
:import <path>	Create a child note from an external Markdown file
:lang <en fr es de>	Switch the interface language — persists to config.toml
:q, :quit	Quit — same as q q in Normal mode

TAGS

:tags <t1,t2,...>	Notes matching <i>any</i> of the given tags, across every mounted vault
:tags list	Every distinct tag, alphabetically, note counts summed — Enter filters by one
:tags limit <vault>	Restrict :tags :tags list to one mounted vault
:tags unlimited	Lift a :tags limit , back to every vault
:tag add <tag>	Add a tag to the selected note
:tag del <tag>	Remove a tag from the selected note

VAULTS & LAYOUT

:panes reset	Reset the split layout to the default 40/40/20
:config unmount <show hide>	Show/hide unmounted-vault placeholder rows in the tree
:config archive <show hide>	Show/hide archived-vault placeholder rows in the tree

HEADLESS / CLI EQUIVALENTS

mycora reindex [--watch]	Same as :reindex , outside the TUI; --watch keeps running
mycora repair [--apply] [--create-stubs] [--vault <n>]	Batch report/fix for broken wikilinks — :brokenlinks' headless, all-at-once sibling
mycora export <title> <out>	Same as :export , by exact title instead of selection
mycora vault ...	add · mount · unmount · archive · unarchive · import · sync-filenames

TIPS

Unknown command	Reports an error in the status bar — never silently a no-op
Popup pick shortcut	Arrowing to :tags <tag1,...> fills in tags — placeholders are stripped, not inserted
Config file	<code>~/.config/mycora/config.toml</code> (Linux/macOS), <code>%APPDATA%\mycora\config.toml</code> (Windows)
Index	Disposable SQLite at <code>~/.local/share/mycora/</code> — safe to delete, rebuilt on demand
PDF export font	Embedded DejaVu Sans/Mono — Latin/Greek/Cyrillic render correctly, CJK/emoji don't yet
